<b>4</b>	<b>API</b>	<b>9</b>
<b>5</b>	<b>Indices and tables</b>	<b>11</b>
	<b>Python Module Index</b>	<b>13</b>

Use Cases:

- Making assertions about api responses more readable
- Extending expectly with new assertions to reduce boilerplate

**Danger:** This library is in alpha. I will try my utmost to not make backwards incompatible changes but it is possible that

# CHAPTER 1

---

## Installing

---

```
$ pip install expectly
```

# CHAPTER 2

---

## API Examples

---

### 2.1 Built In Assertion methods

```
# status_code (with status code number)
expect(response).to.have.status_code(200)

# header (asserts the header exists). Sets the header value to be further ↴ tested against
expect(response).to.have.header('Content-Type')

# equals
expect(response).to.have.header('Content-Type').equal('application/json')

# like (does a regex match against the value)
expect(response).to.have.header('Content-Type').like('application')

# exactly_like (does a regex match against the whole value)
expect(response).to.have.header('Content-Type').exactly_like('^application/ ↴ [\w]*$')

# encoding
expect(response).to.have.encoding('utf-8')

# ok (uses requests.response.ok attribute)
expect(response).to.be.ok
```

### 2.2 Extending expectly.expect with additional assertions

TODO

---

## 2.3 JSON handling in expectly

jsonschema is used for evaluating whether json responses match the relevant schema jmespath is used for navigating/selecting information to test inside of the json response

# CHAPTER 3

---

## Development

---

```
$ git clone https://github.com/huntcsg/expectly.git
$ cd expectly
$ ./utils/manage clean
$ ./utils/manage test
$ ./utils/manage docs
```

1. All pull requests must pass the travis-ci builds
2. All pull requests should include inline (docstring) documentation, updates to built documentation if applicable, and test coverage. This project aspires to be a 100% test coverage library.

# CHAPTER 4

---

## API

---

```
class expectly._expect.expect(response_under_test)
```

The main class in this library. Provides the test methods.

```
classmethod add_assertion(name, assertion_callable, is_property=False, predicate_str=None)
```

Helper function to add an assertion to the expect class

### Parameters

- **name** –
- **assertion\_callable** –
- **is\_property** –
- **predicate\_str** –

### Returns

```
classmethod add_join_word(word, predicate_str=None)
```

Adds a non semantically meaningful join word, e.g. “to”, “and”, etc

### Parameters

- **word** –
- **predicate\_str** –

### Returns

**and\_**

### Returns

**assertion**

Composes the current human readable assertion

### Returns a `str`

**be**

**Returns**

**contains** (*value*)

**encoding** (*encoding*)

**equal** (*value*)

**equals** (*value*)

**exactly\_like** (*regex*)

**get** ()

A lazy getter for the value under test

**have**

**Returns**

**header** (*header*)

Tests that the header exists. Sets the header to the value\_under\_test

**headers** (*headers*)

**json**

**like** (*regex*)

**not\_**

Changes the test method to be a negative assertion

**Returns**

**null**

**ok**

**path** (*path*)

**schema** (*schema*)

**status\_code** (*code*)

**test** (*value=True*)

The default test method. It asserts the passed value is true with the assertion clause

**that**

**Returns**

**the**

**Returns**

**to**

**Returns**

**update\_test\_method** (*fn*)

Given a function calls that function when `expectly.expect.test()` is called.

**Parameters fn –**

**Returns**

**valid**

**value**
